Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

Customer Problem Statement Template

The current IT procurement process for standard laptop orders involves multiple manual steps, including request approval, task creation and assignment. This can result in delays in laptop configuration and increased manual effort for the IT procurement team.

The lack of an automated workflow makes it difficult to ensure that approved laptop requests are promptly converted into configuration tasks and assigned to the Hardware team. This may lead to longer user waiting times, inefficient task management and increased chances of manual errors.

By using ServiceNow Flow Designer, the standard laptop ordering process can be streamlined by automatically creating and assigning catalog tasks after approval. This helps improve efficiency, reduce manual intervention and ensure timely laptop configuration.

I am	An employee requesting a standard laptop
I'm trying to	Get my laptop configured and ready on time
But	The laptop procurement and configuration process takes time
Because	The request requires manual processing, approval and task assignment
Which makes me feel	Frustrated and delayed

I am IT procurement member	I'm trying to Process laptop orders	But Manual process takes time	Because Approval and task assignment are manual	Which makes me feel Frustrated and overloaded
----------------------------------	---	-------------------------------------	--	--

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	An employee requesting a standard laptop	Get my laptop configured and ready on time	The procurement and configuration process takes time	Requests require manual processing, approval and task assignment	Frustrated and delayed
PS-2	An IT procurement team member	Process standard laptop requests efficiently	Catalog tasks need to be created and assigned manually	The process lacks an automated workflow	Overloaded and less productive
