

Solution Requirements (Functional & Non-functional)

Date	27/09/2026
Team ID	SWTID-2026-8900
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Service Catalog Laptop Ordering	Request Standard Laptop via Service Catalog Provide standard hardware options and details Submit order request ("Order Now")
FR-2	Manager Approval Workflow	Auto-route submitted request for approval Update request status to Approved Trigger procurement workflow upon approval
FR-3	Flow Designer Automation	Trigger "Standard Laptop Task" flow automatically Run flow in system context (System User) Pass Requested Item (RITM) details to flow actions
FR-4	Catalog Task Generation	Auto-create Catalog Task upon approval Populate Short Description & Description as <i>"Laptop need to Configured"</i>

		Set Task Approval status to <i>"Approved"</i>
FR-5	Hardware Team Assignment	Automatically assign task to the <i>"Hardware"</i> assignment group Notify Hardware team members of new configuration task Track task fulfillment and completion status

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

NFR No.	Non-Functional Requirement	Description
NFR-1	Usability	Simple and intuitive Service Catalog UI allowing employees to request standard laptops with minimal clicks.
NFR-2	Security	Role-based access control (RBAC) ensuring only authorized approvers and Hardware team members can modify tasks and approvals.
NFR-3	Reliability	Consistent and error-free automated task generation via Flow Designer upon request approval without manual intervention.
NFR-4	Performance	Instant trigger execution and catalog task generation within seconds after approval is logged.
NFR-5	Availability	High platform availability (99.9%) ensuring 24/7 access to the Service Catalog for placing orders.

NFR-6	Scalability	Capable of handling increased volume of concurrent laptop requests across the organization without flow degradation.
