

Project Design Phase

Proposed Solution

Date	27/09/2026
Team ID	SWTID-2026-8900
Project Name	Streamlining IT Procurement – Automating Standard Laptop Orders with Flow Designer

Proposed Solution

S.No.	Parameter	Description
1	Problem Statement (Problem to be solved)	The standard laptop procurement process is often time-consuming and involves several manual activities such as submitting requests, checking details, obtaining approvals, coordinating with IT and procurement teams, and updating request status. This can cause delays, communication gaps, human errors, and difficulty in tracking laptop requests.
2	Idea / Solution Description	The proposed solution uses Flow Designer to automate the standard laptop ordering process. When an employee submits a laptop request, the system automatically validates the request, sends it to the appropriate manager for approval, processes the approved request, updates its status, and sends notifications to the employee and relevant IT/procurement teams. This reduces manual intervention and makes the procurement process faster and more organized.
3	Novelty / Uniqueness	The uniqueness of the solution lies in automating the complete standard laptop procurement workflow using Flow Designer instead of relying on manual emails, spreadsheets, and repeated communication. Predefined workflows, automated approvals, notifications, and status updates provide a standardized and consistent process.
4	Social Impact / Customer Satisfaction	The solution improves employee satisfaction by making laptop requests easier, faster, and more transparent. Employees can receive timely notifications and track their request status. IT and procurement teams benefit from

S.No.	Parameter	Description
		reduced repetitive work and improved efficiency. The solution also supports a better digital workplace experience.
5	Business Model (Revenue Model)	The solution can be implemented as an internal IT automation system for organizations. Revenue can be generated through implementation services, workflow customization, maintenance, technical support, and integration with existing IT service management systems. Organizations can also reduce operational costs by minimizing manual administrative work.
6	Scalability of the Solution	The solution can be scaled to support a large number of employees and laptop requests. The same Flow Designer approach can be extended to other IT procurement processes such as monitors, keyboards, mobile devices, software licenses, and other IT assets. Additional approval levels, departments, vendors, and automated notifications can also be added as the organization grows.

Short Project Summary

Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer provides a structured and automated approach to laptop procurement. By replacing repetitive manual activities with automated workflows, the solution aims to **reduce processing time, minimize errors, improve transparency, and increase employee and IT team satisfaction.**
