

ServiceNow Project Documentation

1. Introduction

Project Title: Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

Team Members & Roles:

- **Asmi.E (Team Lead):** Overall Project Coordination, Flow Architecture & **Project Documentation Phase & Demonstration Phase.**
- **Akalya.J.LV:** **Project Planning Phase & Testing Phase.**
- **Akshaya.R:** **Project Design Phase**
- **Akshaya.P:** **Project Design Phase & Customer Journey Mapping.**
- **Teena.C.J:** **Brainstorming/Ideation Phase.**

2. Project Overview

- **Purpose:** The primary objective of this project is to automate the IT hardware procurement process using ServiceNow Flow Designer. It eliminates manual ticketing overhead by automatically creating and assigning tasks upon user request.
- **Features:**
 - Self-service Catalog Item for standard laptop procurement.
 - Automated Service Catalog Task (SCTASK) generation upon Request Item (RITM) creation.
 - Direct auto-assignment of task tickets to the Hardware Assignment Group.

3. Architecture

- **Frontend:** ServiceNow Service Portal (Catalog Item Request Form).
- **Backend:** ServiceNow Flow Designer Engine for workflow automation.

- **Database:** ServiceNow Data Platform (Tables: sc_request, sc_req_item, sc_task, sys_user_group).

4. Setup Instructions

- **Prerequisites:** ServiceNow Personal Developer Instance (PDI), Administrative Access, Flow Designer Plugin Enabled.
- **Installation & Configuration Steps:**
 1. Log into the ServiceNow Instance as Administrator.
 2. Open **Flow Designer** and create a new flow named Standard Laptop Task Flow.
 3. Define Trigger Condition: *Service Catalog*.
 4. Add Action: *Create Catalog Task* with predefined values (Short Description: "Laptop needs to be configured", Assignment Group: "Hardware").
 5. **Activate** the flow.
 6. Navigate to **Maintain Items**, select Standard Laptop, and link the newly activated flow.

5. Folder Structure / Component Architecture

- **Catalog Item:** Standard Laptop (Service Catalog)
- **Flow Name:** Standard Laptop Task Flow (Flow Designer)
- **Flow Trigger:** Service Catalog Trigger
- **Flow Actions:** Create Catalog Task Action
- **Assignment Group:** Hardware Group

6. Running the Application

- Open ServiceNow Service Portal.
- Search for **Standard Laptop** in the Service Catalog search bar.
- Fill in the mandatory request fields and click **Order Now**.

- System automatically generates REQ, RITM, and triggers the automated SCTASK assignment.

7. API Documentation

- **Trigger Mechanism:** ServiceNow native internal Event API & Flow Engine Execution APIs.
- **Record Handlers:** Automated REST/Data APIs handling records insertion across sc_req_item and sc_task tables.

8. Authentication

- Secured via ServiceNow Role-Based Access Control (RBAC).
- Requester requires standard snc_internal portal access.
- Task fulfillment access is restricted exclusively to members belonging to the **Hardware Assignment Group**.

9. User Interface

- **End-User View:** Clean, simplified Service Portal interface for placing orders.
- **Fulfiller View:** Detailed Workspace view for Hardware Support Engineers to track and close assigned procurement tasks.

10. Testing

- **Testing Strategy:** End-to-End Functional Flow Verification.
- **Test Case Execution:**
 1. Submit order for Standard Laptop.
 2. Verify that RITM status changes appropriately.
 3. Confirm that SCTASK is auto-generated with the Short Description *“Laptop needs to be configured”* and correctly assigned to the *“Hardware Group”*.

11. Screenshots or Demo

Demo Link: <https://drive.google.com/file/d/1U3h3Fv-oBT2aydiZpTrTDwwtLq9eRNp4/view?usp=drivesdk>

12. Known Issues

- Flow execution may experience minor delays (2-3 seconds) depending on PDI Instance hibernation or background processing loads.

13. Future Enhancements

- Integrating automated email/SMS notification actions to update end-users on task progress.
- Linking CMDB Asset Management to auto-update hardware inventory counts upon task completion.
